

February – March Gardening
By CPVGC Member & Master Gardener Jan Behler

- 1) Remember to winter water every 3 weeks or so for outdoor plants and trees and lawns depending on how much snow we get.
- 2) Snow covers a lot of food sources for birds in the winter so if that's your thing feed the birds!
- 3) The best time to prune most deciduous trees is late February, all of March, or early April.
- 4) If your aspens had oyster shell scale last year or you see it this year March is a good time to apply a dormant oil spray before bud break.
- 5) By March a pre-emergent herbicide may be applied to your lawn to nip those weeds in the bud.
